

# INVERTEBRATE SURVEY

When investigating the invertebrates in your chosen area bear in mind that the time of year may affect your findings - many hibernate during the winter.

| Legs        | Invertebrate                | How many? | TOTAL |
|-------------|-----------------------------|-----------|-------|
| 0           | Snails                      |           |       |
| 0           | Slugs                       |           |       |
| 0           | Earthworms                  |           |       |
| 6           | Beetles                     |           |       |
| 6           | True bugs                   |           |       |
| 6           | True flies                  |           |       |
| 6           | Bees/wasps                  |           |       |
| 6           | Ants                        |           |       |
| 6           | Butterflies/moths           |           |       |
| 6           | Crickets/grasshoppers       |           |       |
| 6           | Earwigs                     |           |       |
| 6           | Unidentified flying insects |           |       |
| 8           | Spiders/harvestmen          |           |       |
| Lots        | Woodlice                    |           |       |
| Lots        | Centipedes                  |           |       |
| Lots        | Millipedes                  |           |       |
| Hard to see | Insect larvae               |           |       |
| Other       | Other invertebrates         |           |       |
